

Massey-Harris No 7 Cylinder Hay Loader

Raking Width 6 feet, Maximum elevation 10 feet 6 inches.

A light, strong, easy-running loader that does a fine job of elevating from the windrow and with the capacity to handle heavy crops. Deck can be adjusted to deliver the hay just where it is convenient to build a big, substantial load. Sturdy in construction yet light in weight, the Massey Harris No. 7 Hayloader is light draft and easily handled by the team.

This interesting addition to the display was retrieved from the banks of the Oroua river at the end of Armadale Road, Cheltenham early in 2008. Once again we are in appreciation of the great job of restoration Brian Schnell has achieved with this rare item of hay making equipment from the horse-drawn era. This loader can be hitched to a high or low wagon without making any special adjustments and is uncoupled by simply pulling a rope.
